1 A. He has a degree in geology. He has been
2 doing this type of analysis for 30 years. He was
3 trained, I think at McCrone, way back when. And he
4 has the patience to analyze at the PLM level that
5 takes long periods of time. This is not your
6 standard PLM analysis that somebody may do for an
7 asbestos-containing bulk sample. It --

8 Q. Why does it take so much longer to analyze
9 talc for asbestos using PLM than a typical
10 asbestos-containing material?

11 A. Well, it doesn't have to take that long,
12 and I think the results show it. You don't find
13 anything. Because you're at these trace levels, you
14 have to make sure you cover the entire area.

15 Paul looks at approximately
16 950 millimeters squared area. And you have to be
17 able to spend the time.

18 And in addition to him doing that,
19 spending the time, we have a high definition camera
20 set up on the polarized light microscope connected to
21 a high definition monitor so that when Mr. Hess finds
22 a potential amphibole structure, he can then look at
23 it on the monitor so that he can do fine focus. And
24 also we have a special objective lens that's a plane
25 objective lens that flattens the -- gives you a
